

Counting shops and other outlets

The purpose of this exercise is to identify and tally all the different types of food retail outlets (as categorised in EPOCH) surrounding the area in which the 1km observation walk was conducted; i.e. the centre and/or most frequented part of town. Using the map that you have been provided with as a guide, all food retail outlets within this radius will need to be identified and tallied using a predetermined walking route. The use of maps accessed via mobile devices is also recommended.

- Each store should be put into one category only. However, there may be one exception that is for 'stores that sell alcohol.' E.g. If a supermarket sells alcohol, mark it down as 'supermarket' as well as a 'store that sells alcohol'
- If a store seems to fit into more than one category, categorize it into the best option available.
